1. EPICs

I split the requirements into 3 Epics and ran them across two sprints. Epic 1 and Epic 2 each had 2 stories worth 8 points, and Epic 3 had 2 stories worth 13 points since the duplicate-vote story was a lot more involved than the rest. All three finished at 100%.

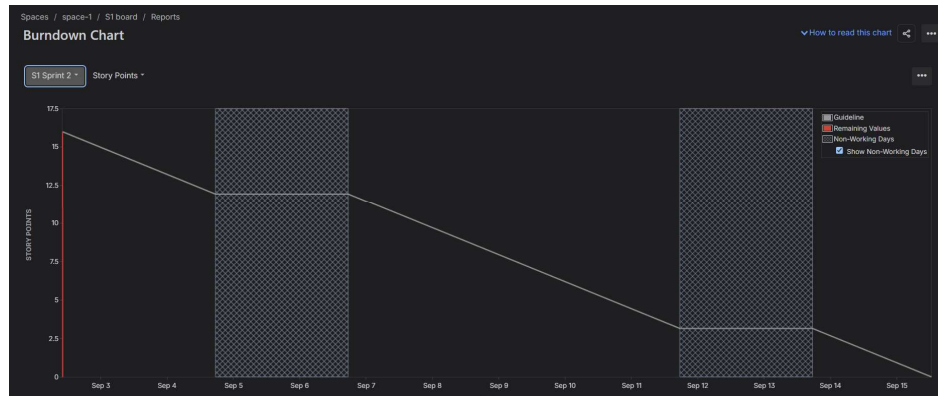

2. Burndown Charts

Sprint 1 (13 points — stories 1.1, 2.1, 3.1):

Sprint 2 (16 points — stories 1.2, 2.2, 3.2):

3. Reflection Questions

Did your estimations reflect the actual effort?

For the most part, yeah. I gave the duplicate-vote story 8 points because it involves session verification and updating the tally in real time, and that felt right once I actually thought through what it would take to build. The 3-point stories like setting a reading goal were about as simple as I expected, so those held up fine too.

Was your backlog well-prioritized?

I think so. Instead of finishing one Epic completely before touching the next, I picked one story from each Epic for Sprint 1, so by the end of week one there was at least some progress on reading progress, discussions, and voting all at once instead of just one feature being fully done.

How did your simulated sprint align with your plan?

Both sprints ended up at 100% complete, and the burndown charts show the remaining points hitting zero well within the sprint window. The drop looks sudden in the chart because I moved the cards to Done close together instead of spacing them out, but the actual completion matched what I'd planned.

What insights did the burndown chart give about your team's capacity?

Going by these two sprints, something like 13 to 16 points a week seems doable for one person working through this backlog. If this were a real team, I'd probably want to split the 8-point vote-prevention story into smaller pieces since it's the heaviest single item by a fair margin.
